Medical college is more than a training ground for doctors.

HOW TO READ THIS SERIES

- RED A CRITIQUE
- BLACK AN INSIGHT
- BLUE THE EVIDENCE

On medical education, from a house surgeon's lens.

MEDX TALKS · 25 OCT 2026

Dr. Sidharth Narayanan · House Surgeon, GMC Kozhikode

The MBBS is the foundation of every doctor. Right now, it is undervalued.

This series starts there: bringing value back to undergraduate medical education.

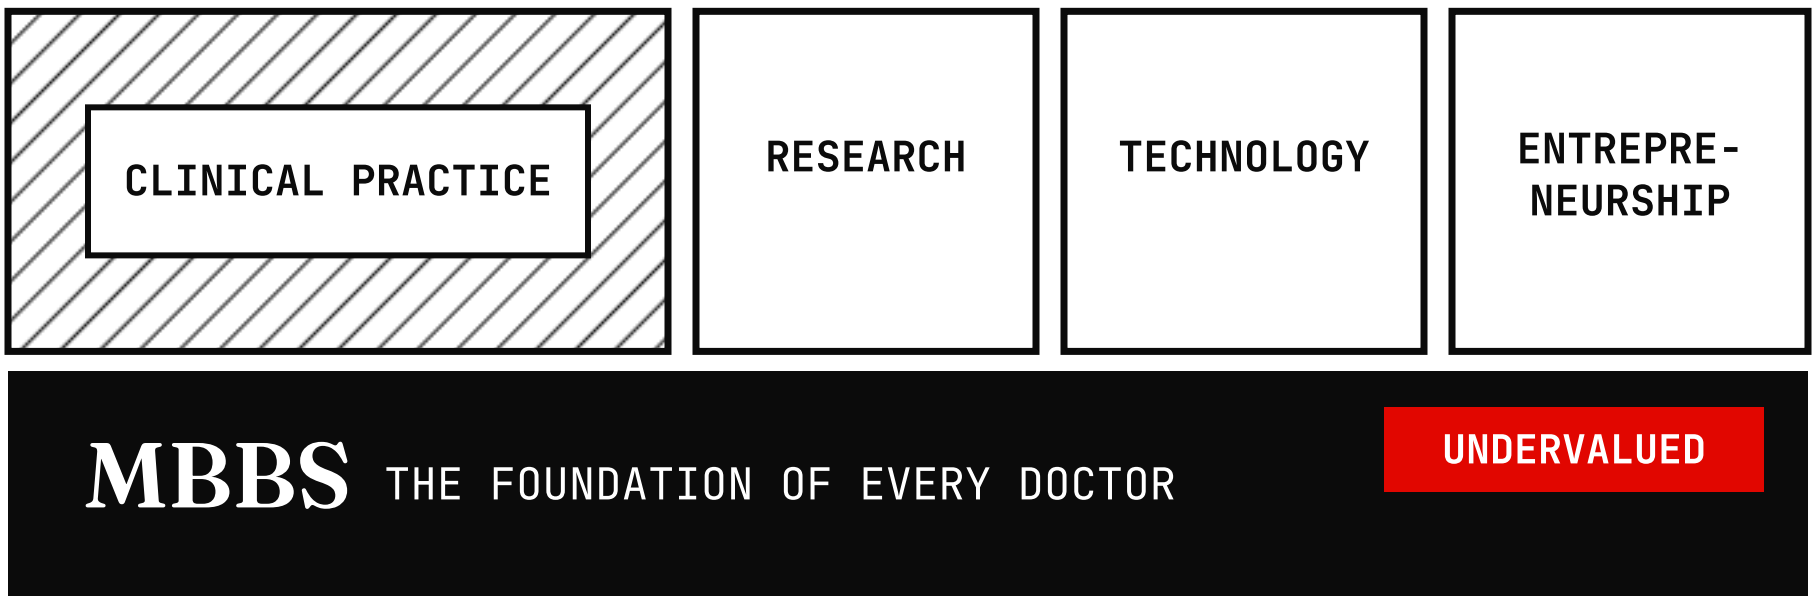

Fig. 0 — Clinical practice rests on it, and so does everything else a doctor may choose to build.

We train doctors. But is that all a medical college should aspire to do?

A reflection from within medical education.

Dr. Sidharth Narayanan · House Surgeon, GMC Kozhikode

Are we getting the most out of undergraduate medical education?

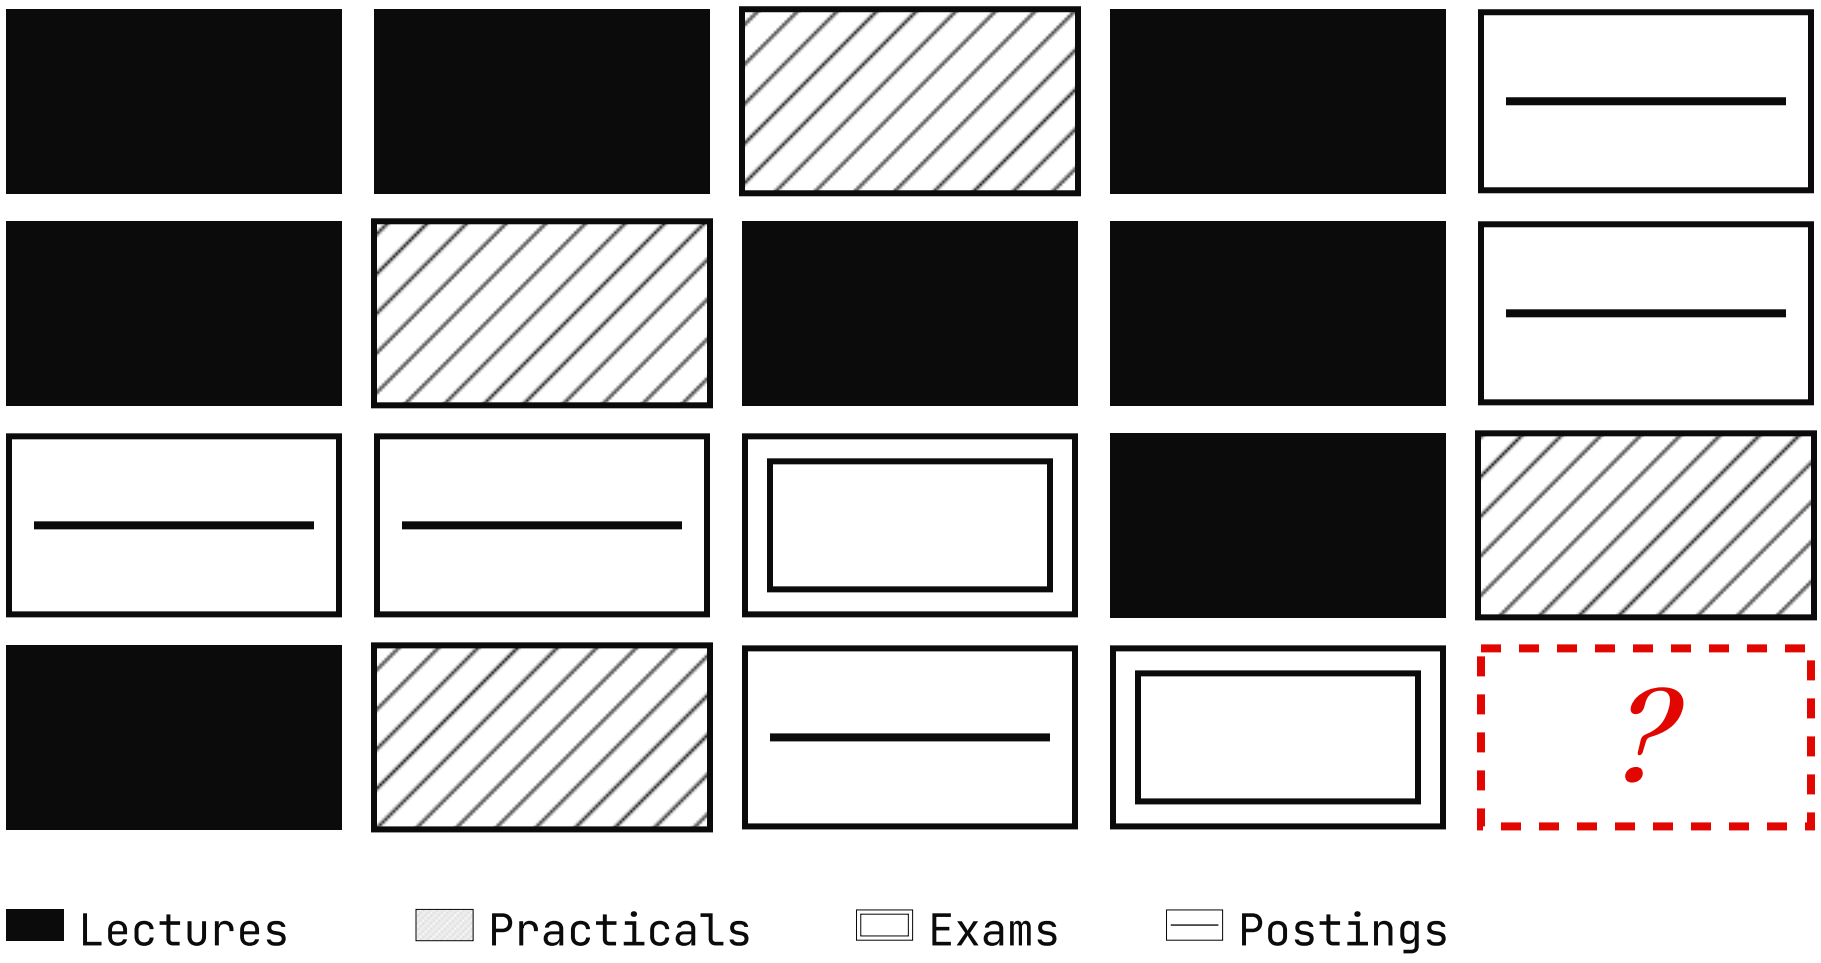

Fig. 1 — The undergraduate timetable (illustrative). **What fills the empty cell?**

Has MBBS become a stepping stone to NEET-PG?

...rather than an experience students fully value in itself.

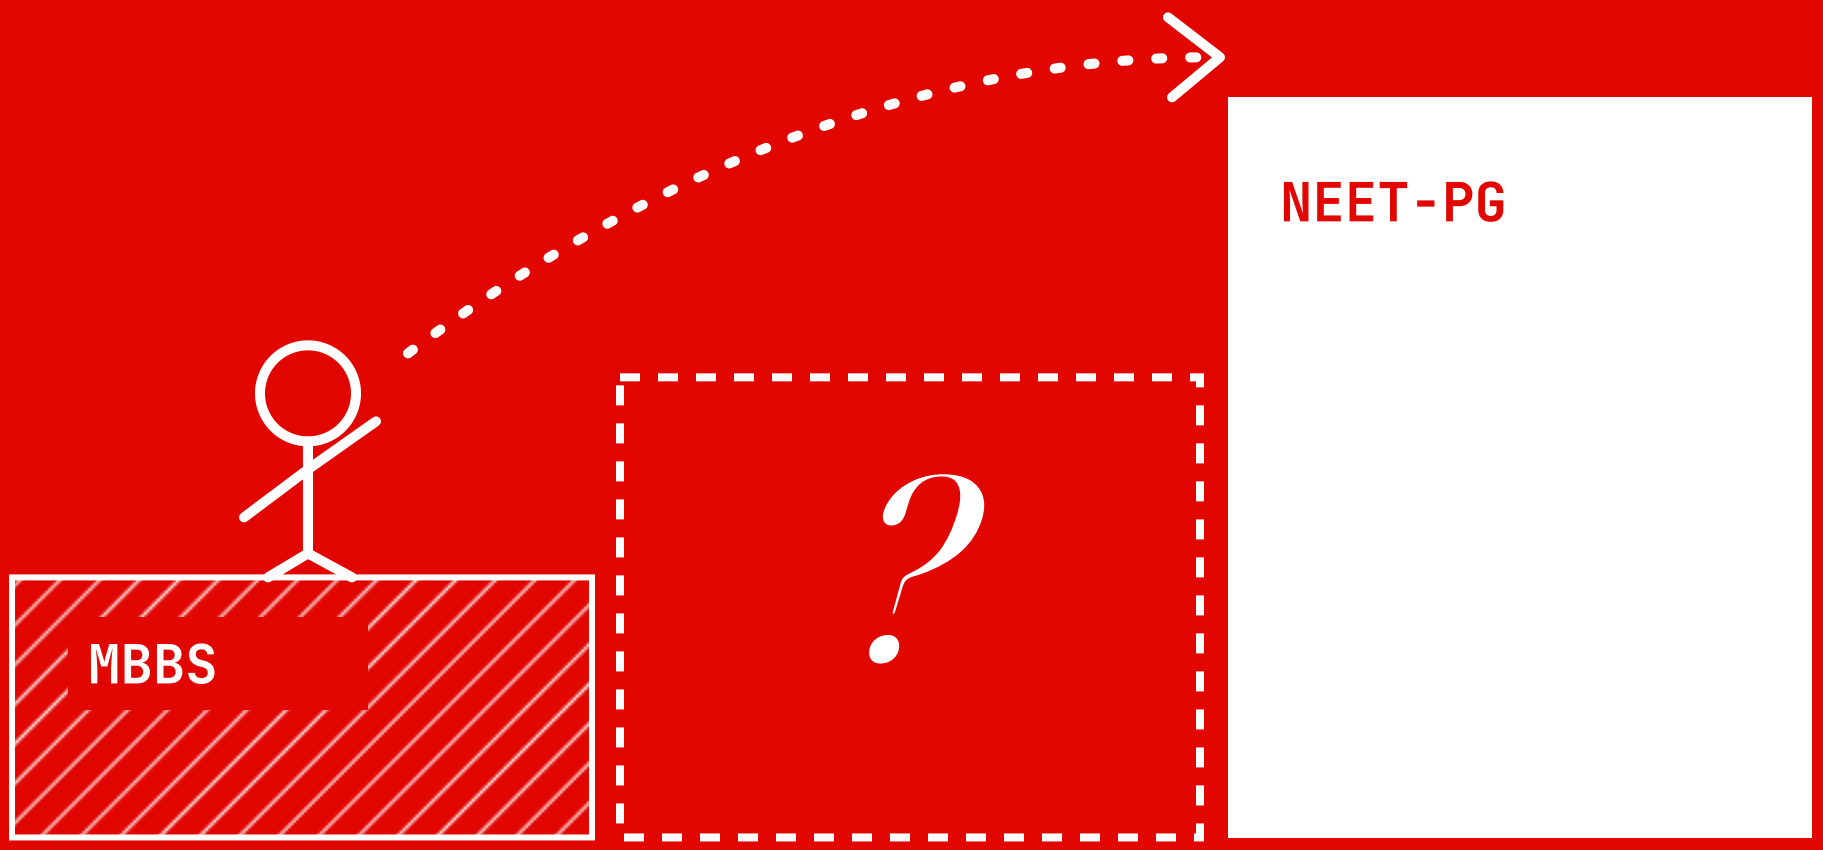

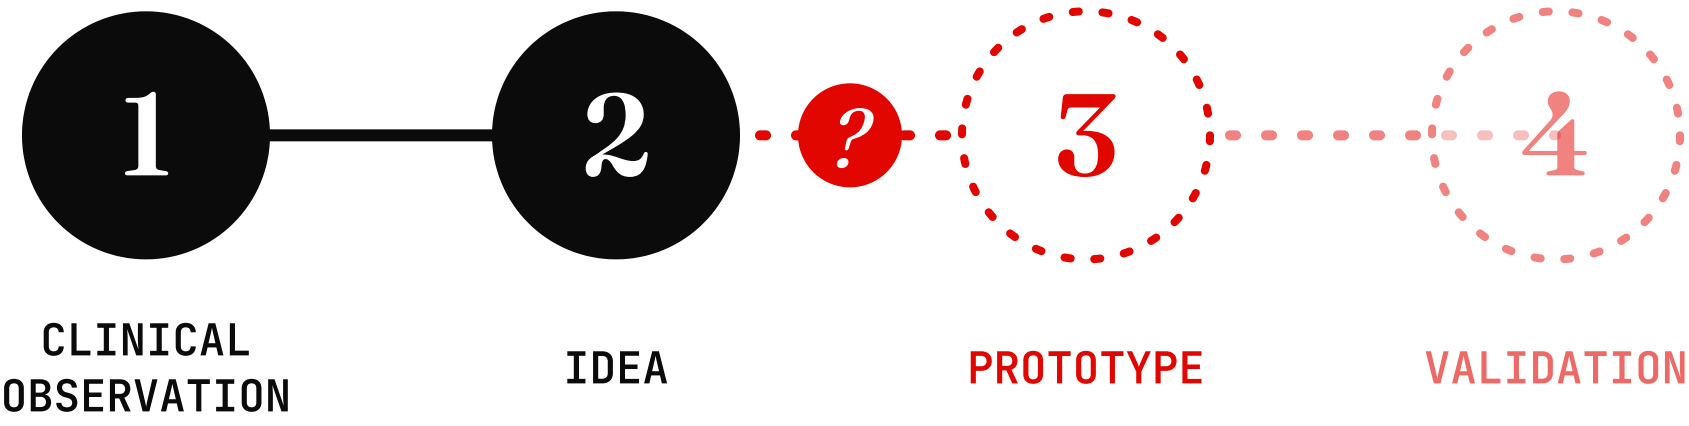

Fig. 2 — The step, and the staircase beyond it.

Students see clinical problems every day. What happens to the solutions they imagine?

The pathway exists. The support often doesn't.

Fig. 3 — From clinical observation to validation.

Clinical understanding needs to meet engineering expertise.

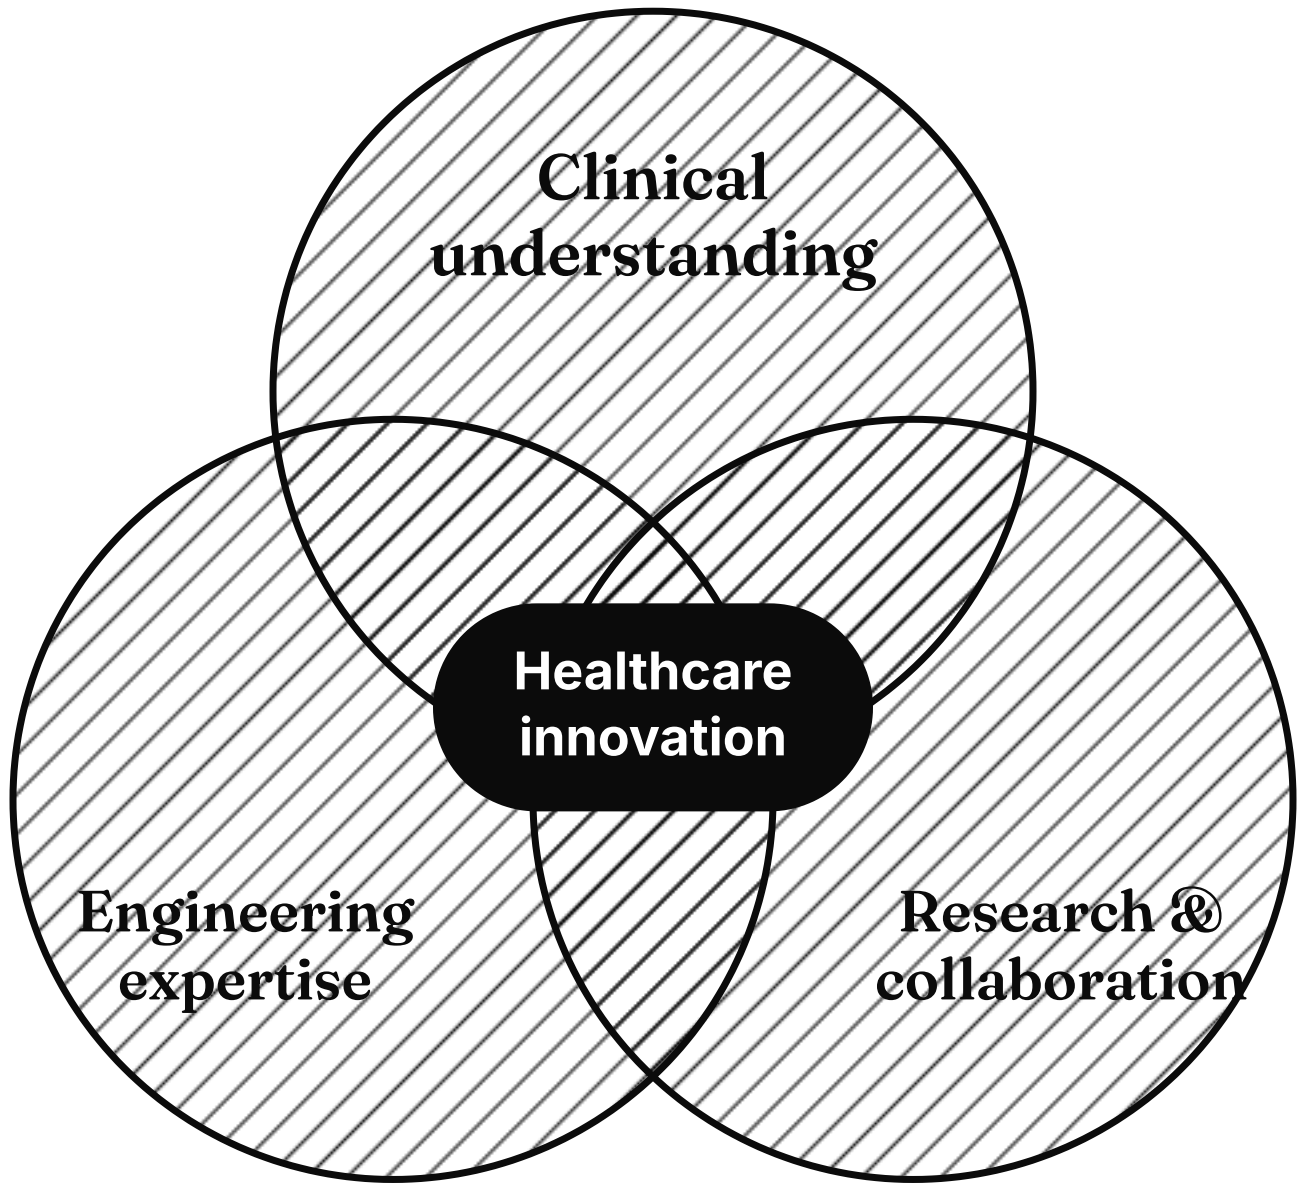

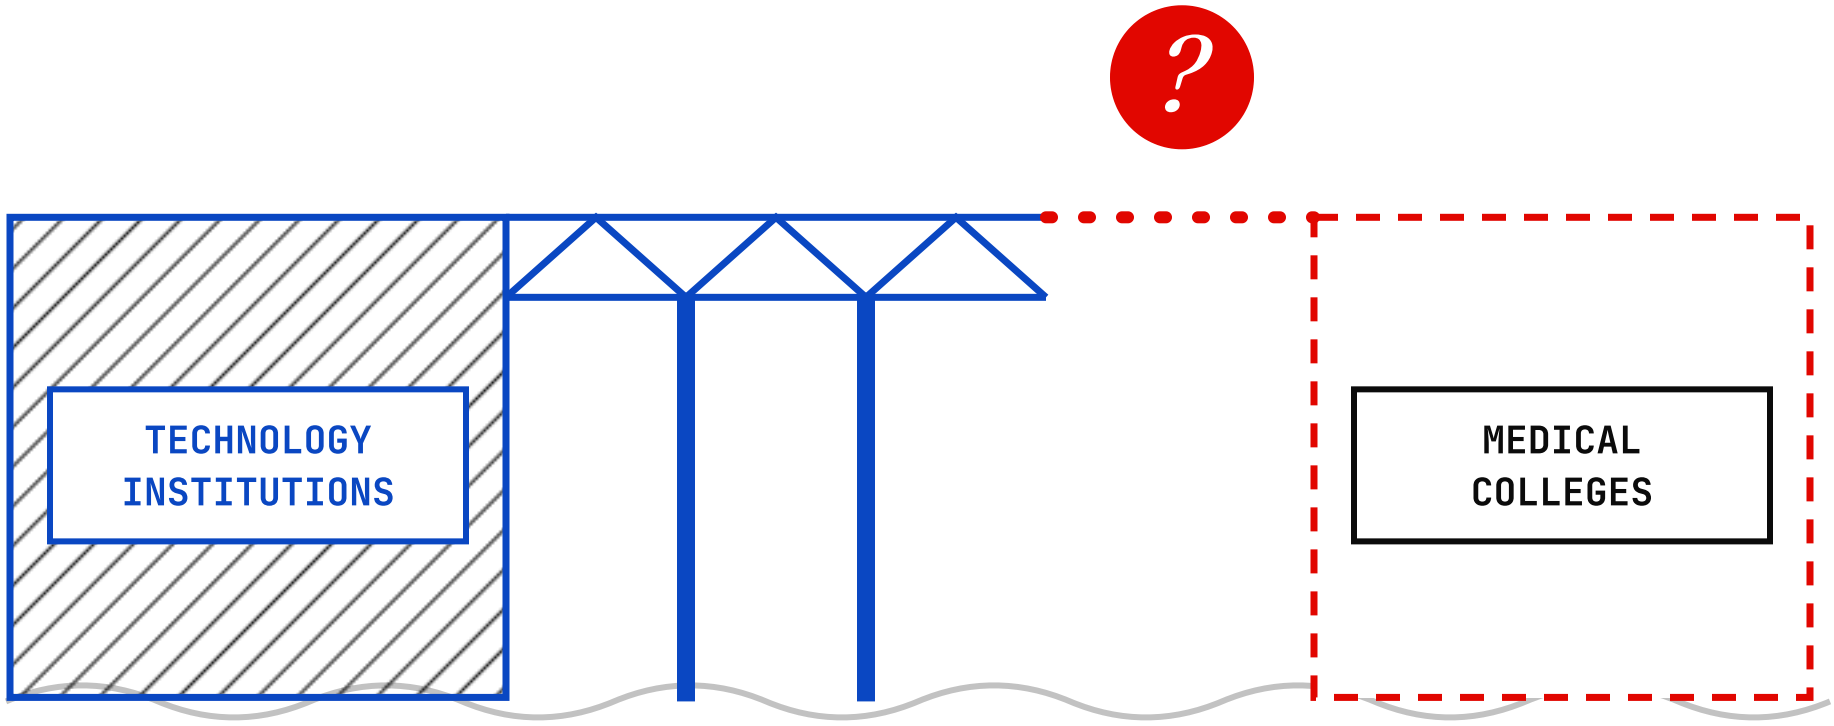

Fig. 4 — Where the pieces overlap.

FIG. 5

Technology institutions are building bridges towards medicine. What about the other direction?

Sources: IIT Madras, Department of Medical Sciences and Technology and its BS in Medical Sciences and Engineering · IIT Kharagpur, School of Medical Science and Technology · IIT Kanpur, Gangwal School of Medical Sciences and Technology.

Not another ~~compulsory subject.~~

An environment that makes research and innovation possible, for students who want to explore.

~~Another compulsory subject~~

→

An environment that supports exploration

A medical student with the people and tools to try.

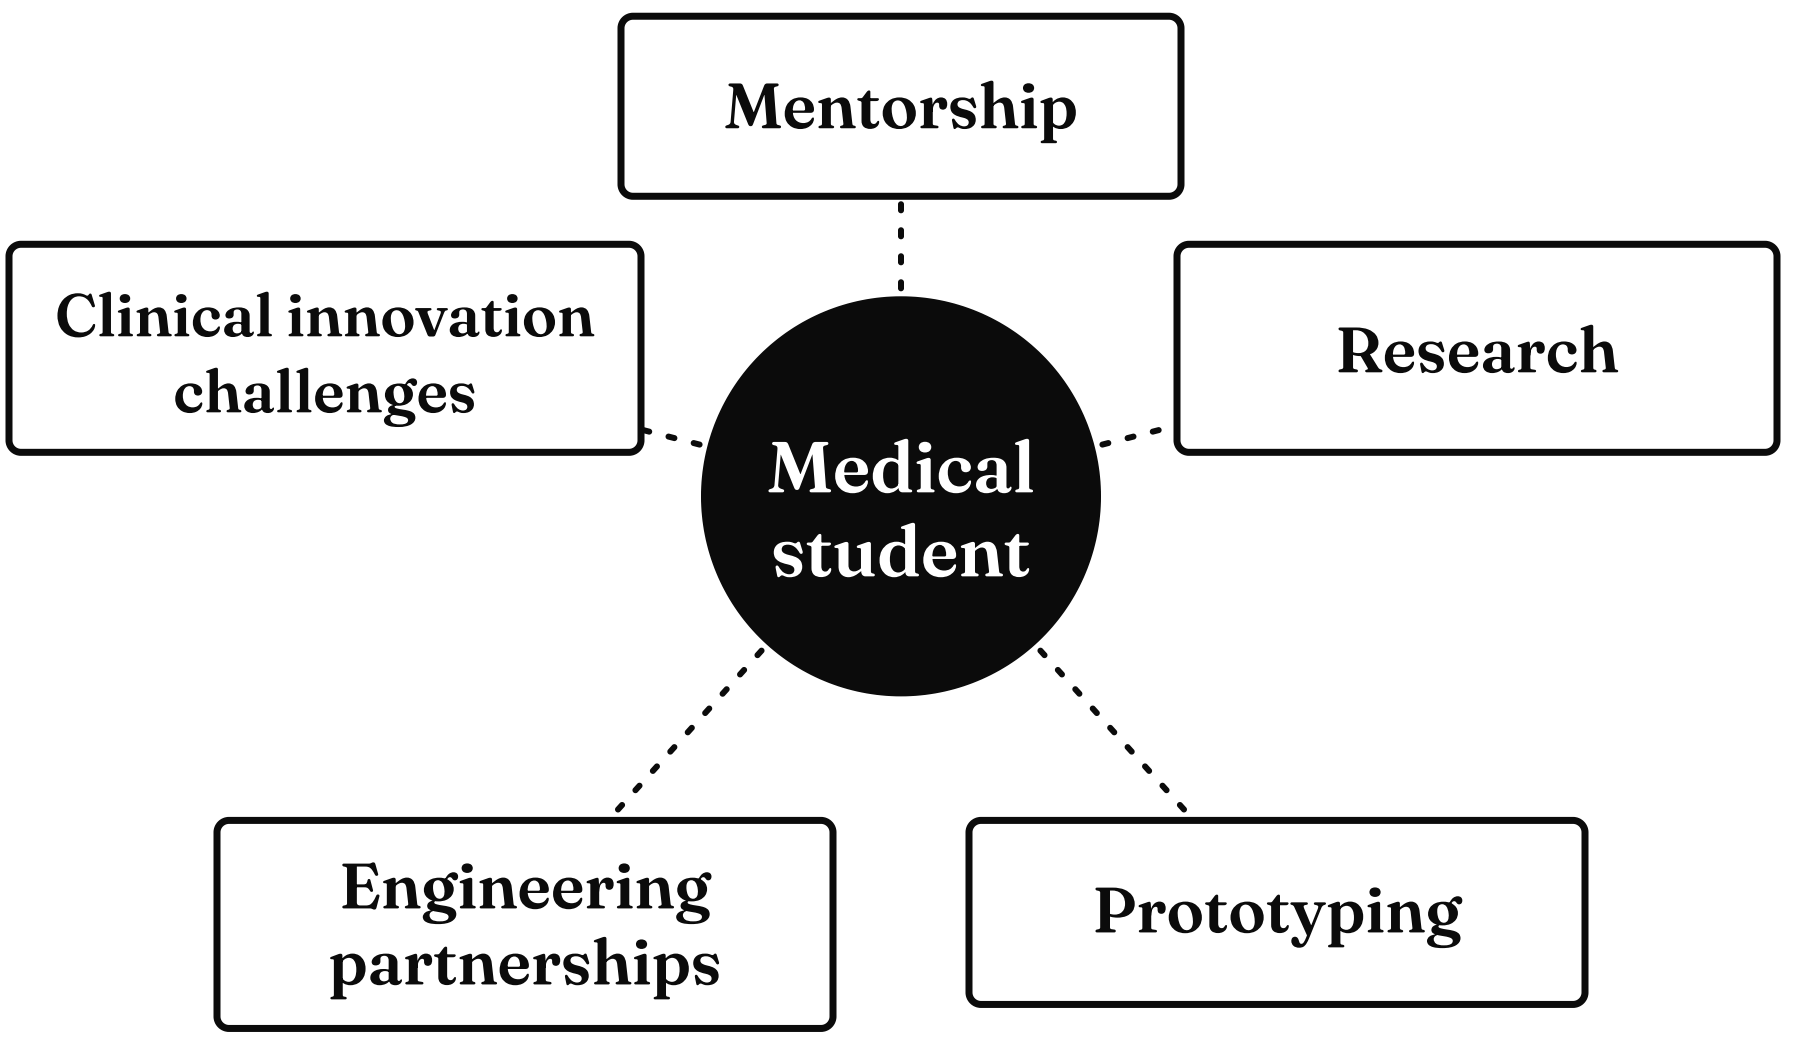

Fig. 6 — What the environment could offer.

What medical college builds can be applied far beyond the clinic.

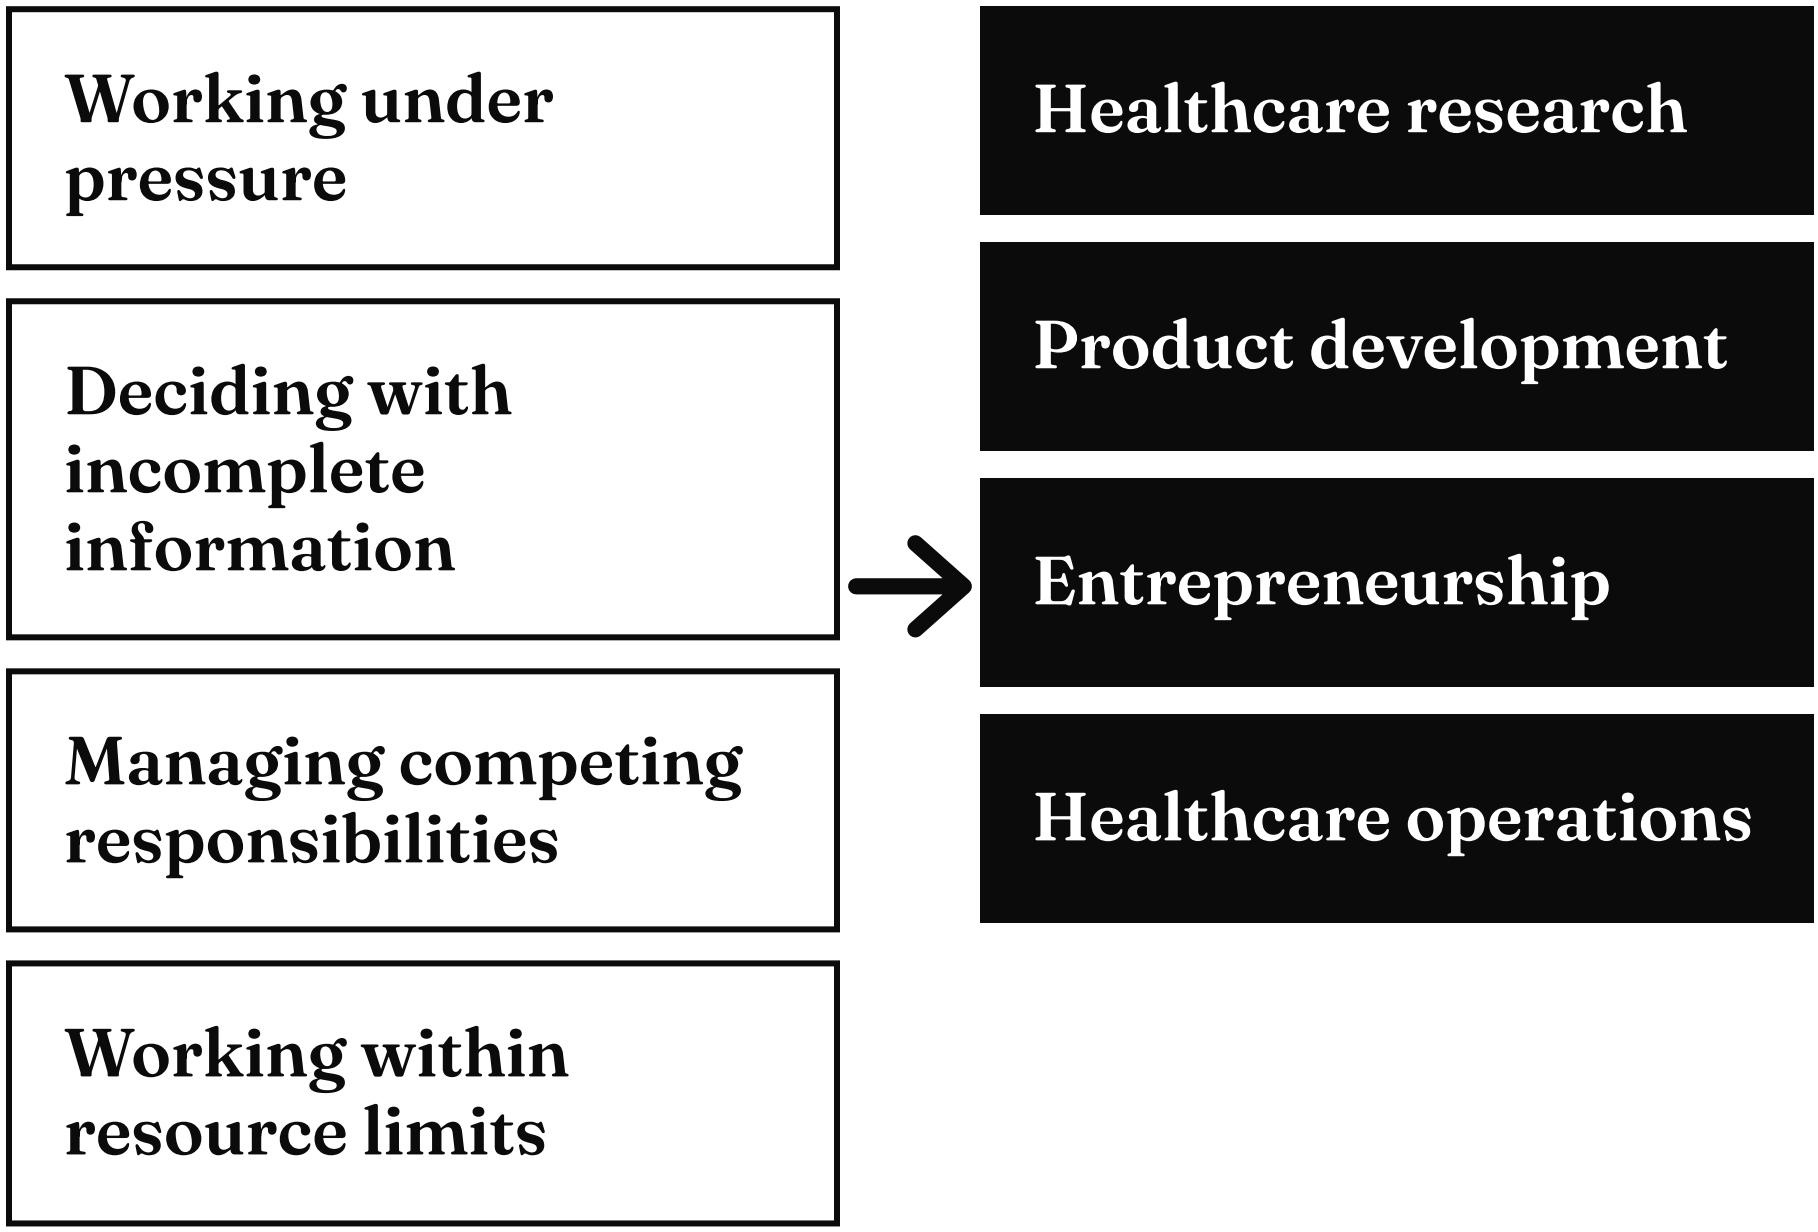

Fig. 7 — Skills built in training, and where else they can go.

Two things, together.

1 **Improve the education we provide.**

2 **Expand what medical education can enable.**

A medical college should be more than a place where we learn medicine. It should be a place where we learn what we can do with it.

Dr. Sidharth Narayanan

House Surgeon, GMC Kozhikode

290+ days into internship
