Medical college is *more than* a training ground for doctors.

A REFLECTION · FIG. 0

On medical education, innovation and what a medical college could enable.

THE AUTHOR

We train doctors. But is that *all* a medical college should aspire to do?

A reflection from within medical education.

Dr. Sidharth Narayanan · House Surgeon, GMC Kozhikode

Are we getting the most out of undergraduate medical education?

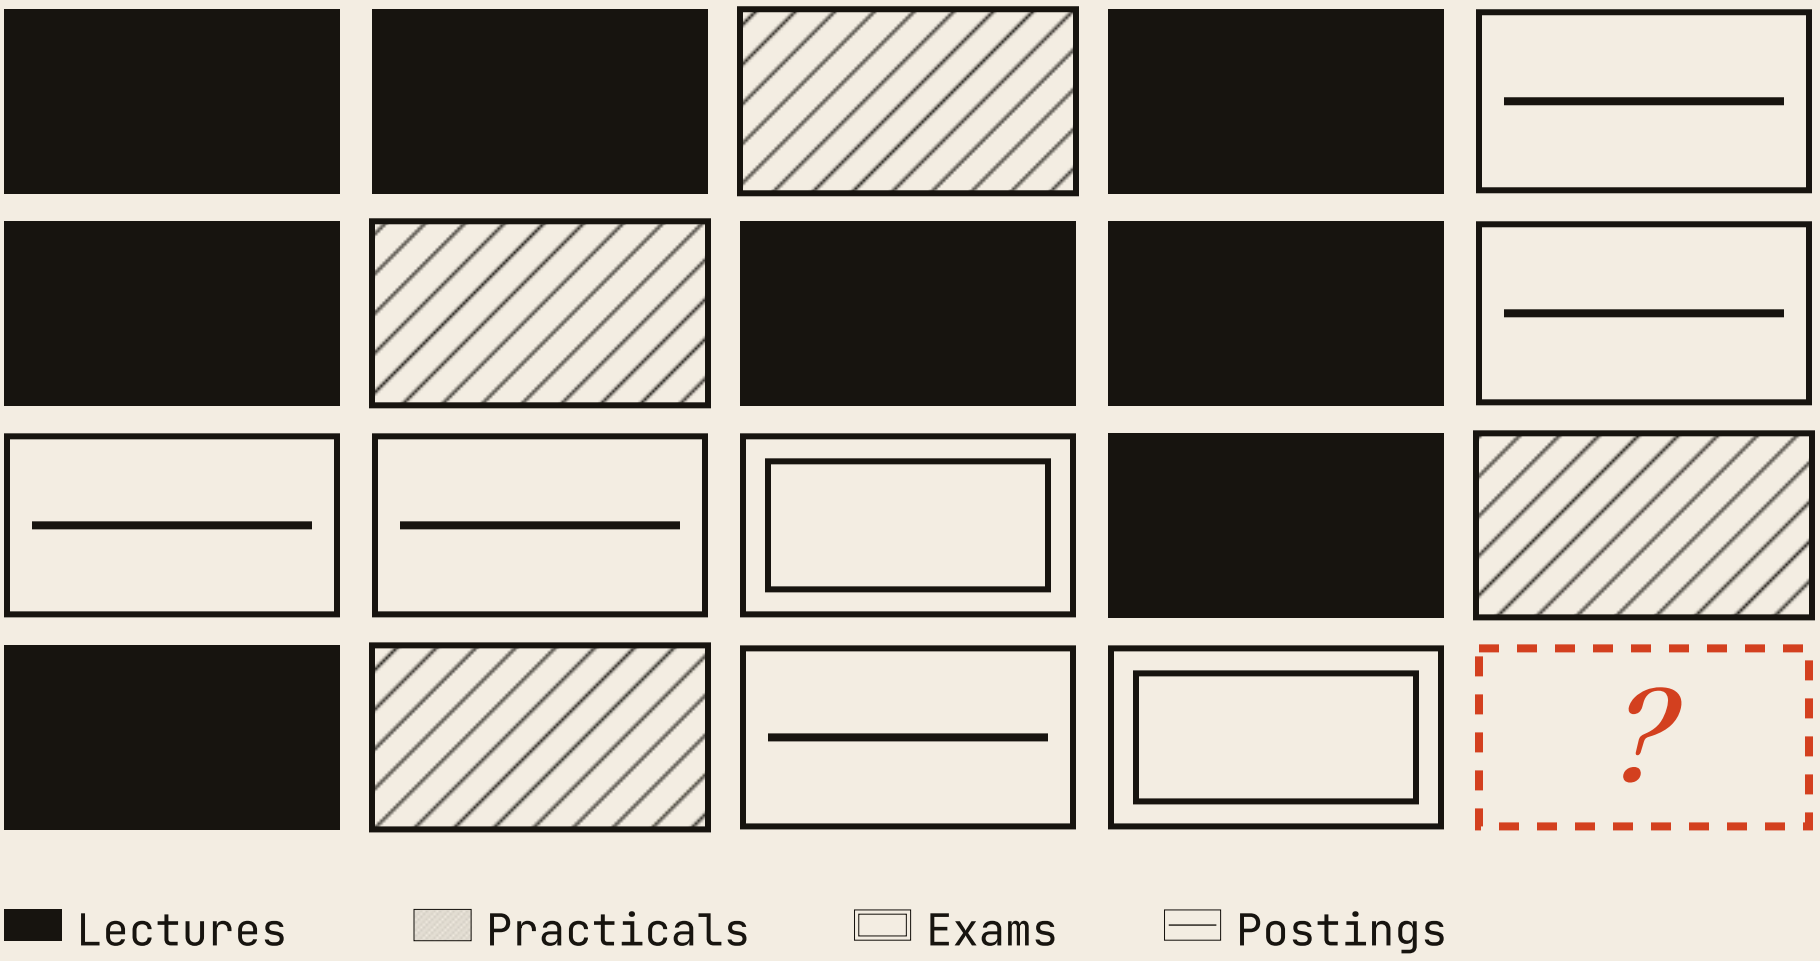

Fig. 1 — The undergraduate timetable (illustrative). What fills the empty cell?

Has MBBS become a *stepping stone* to NEET-PG?

...rather than an experience students fully value in itself.

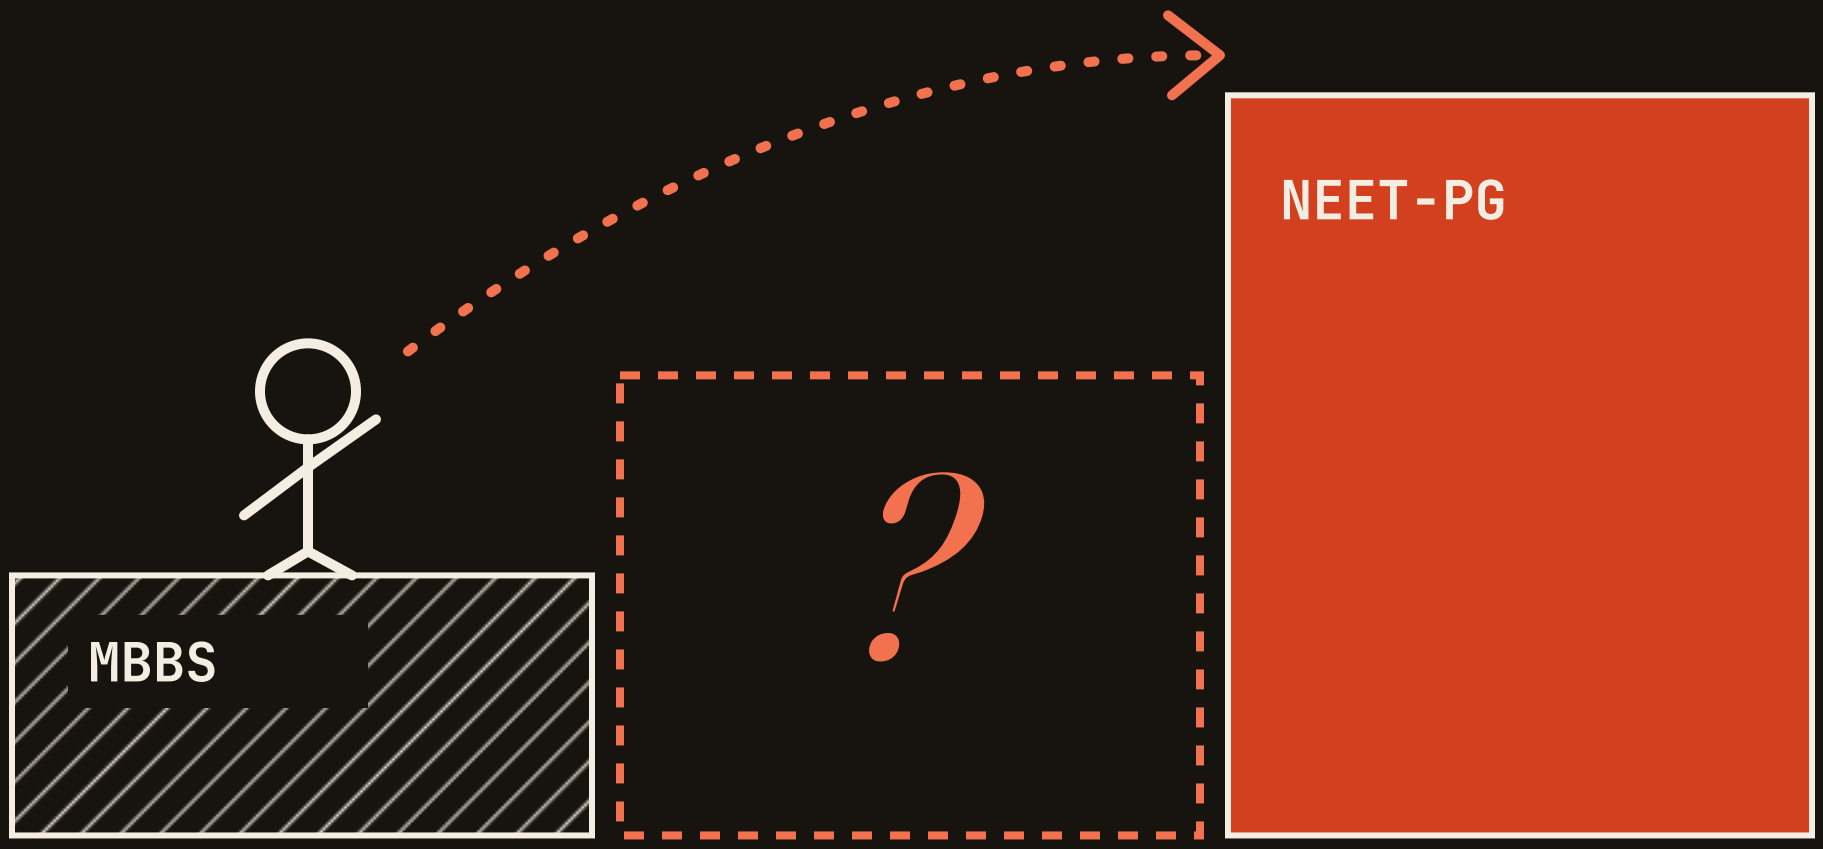

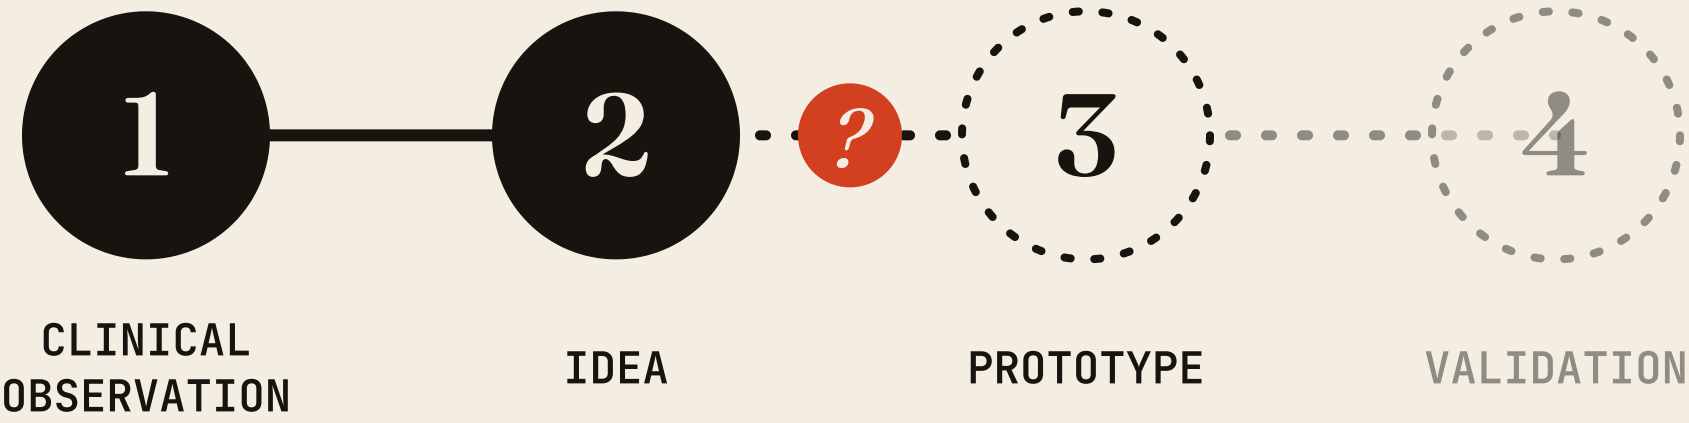

Fig. 2 — The step, and the staircase beyond it.

Students see clinical problems every day. What happens to the *solutions* they imagine?

The pathway exists. The support often doesn't.

Fig. 3 — From clinical observation to validation.

Clinical understanding needs to meet *engineering expertise.*

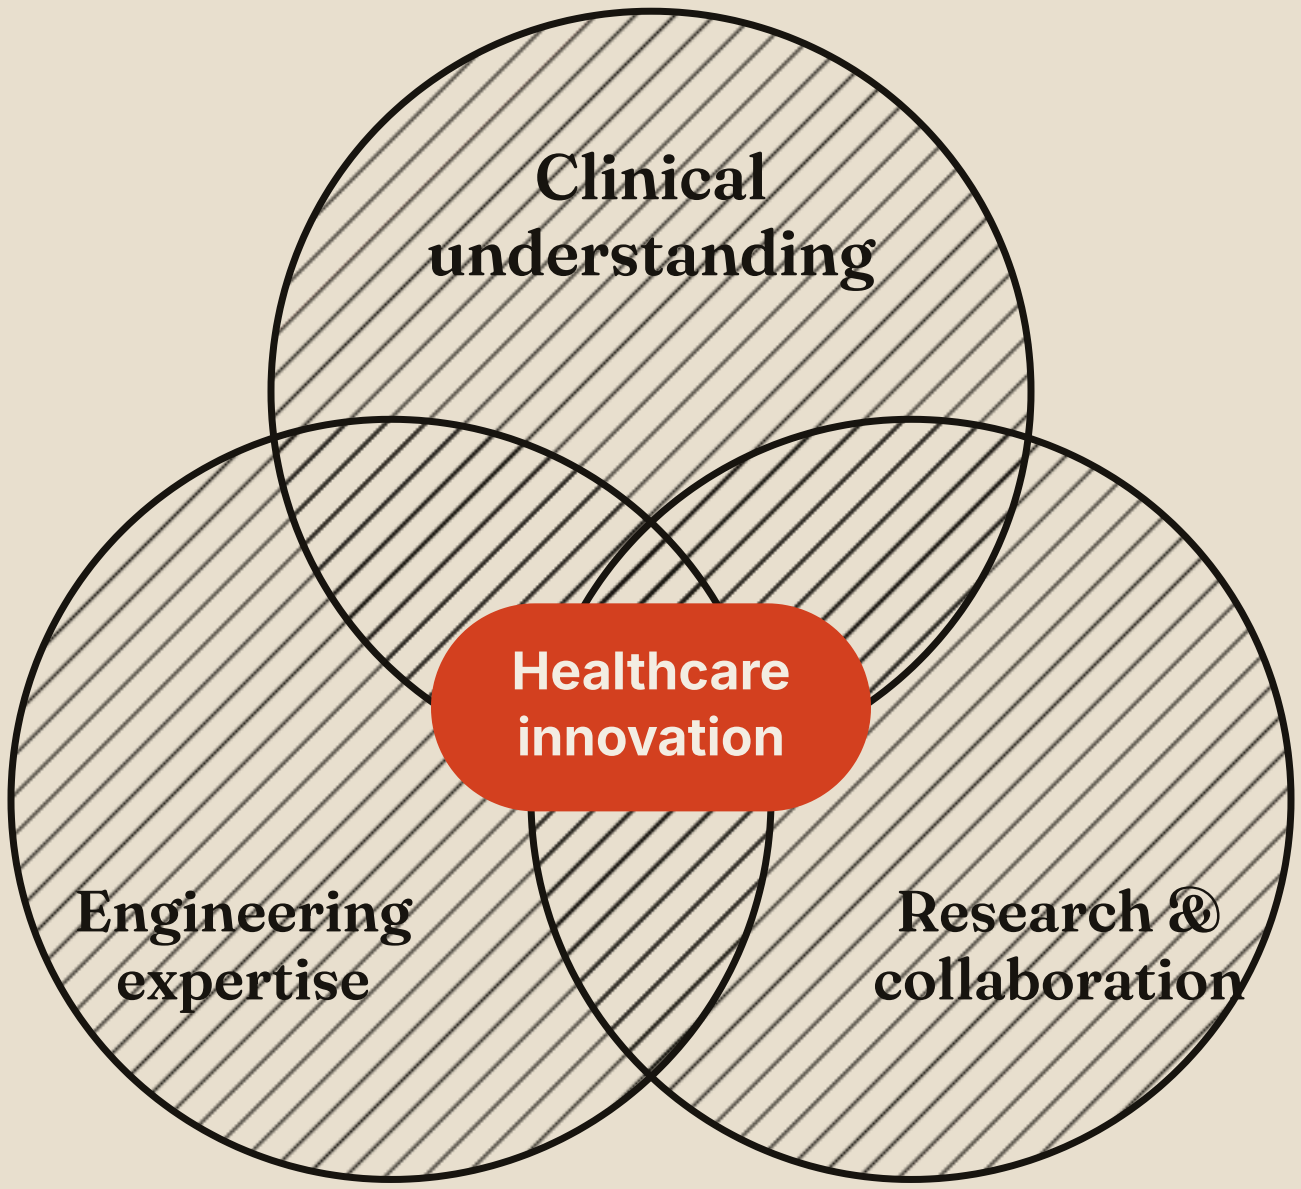

Fig. 4 — Where the pieces overlap.

Technology institutions are building bridges towards medicine. *What about the other direction?*

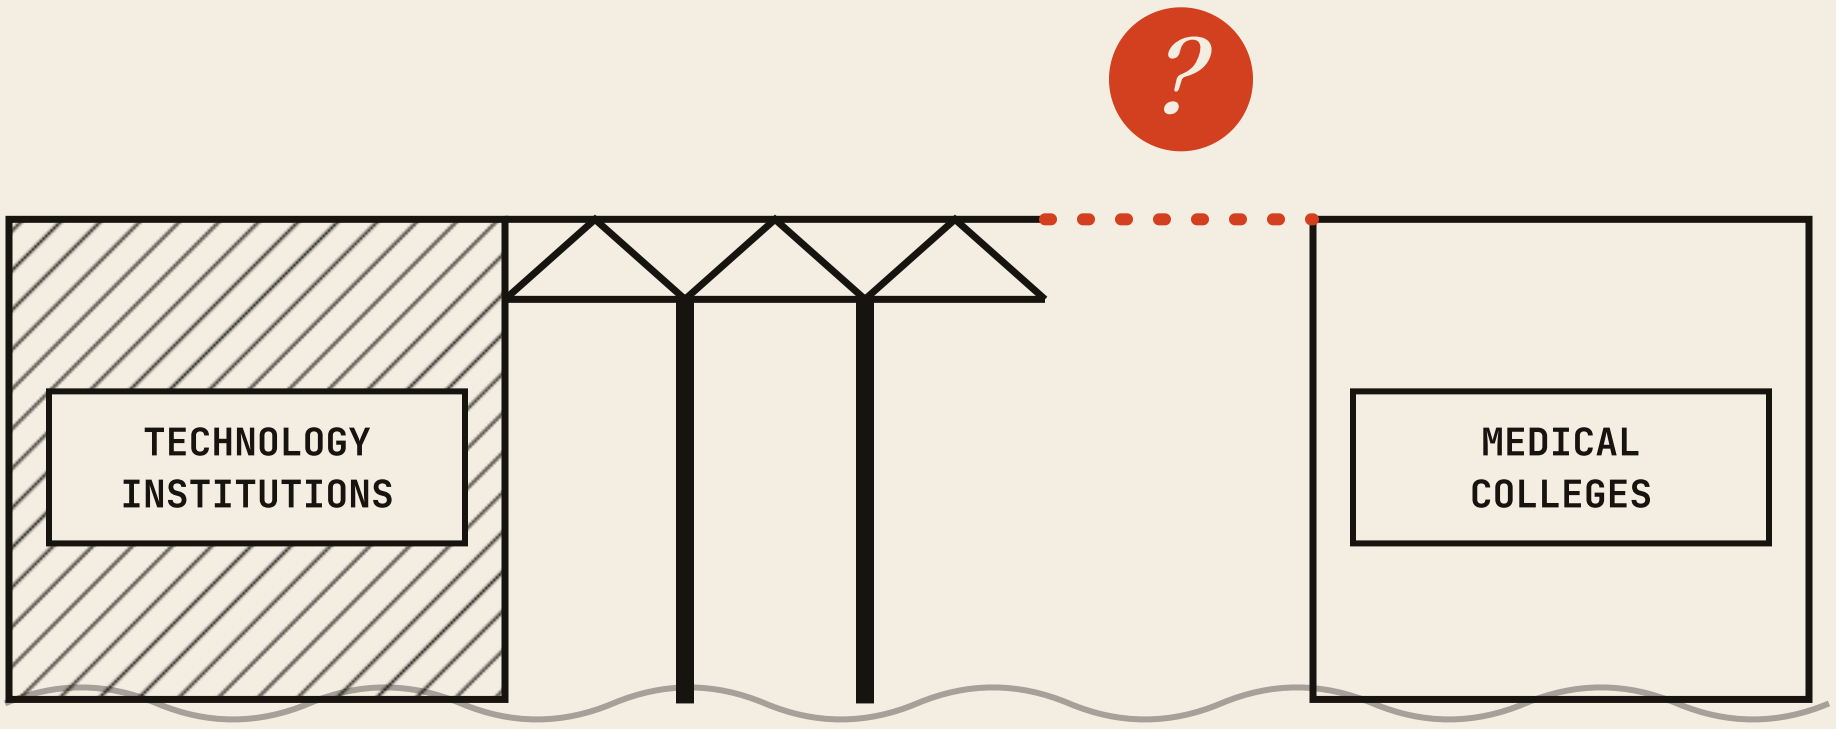

Fig. 5 — Initiatives at IIT Madras, IIT Kharagpur and IIT Kanpur are bringing medical sciences and technology closer together.

Not another *compulsory subject.*

An environment that makes research and innovation possible, for students who want to explore.

~~Another compulsory subject~~

→

An environment that supports exploration

A medical student with the *people and tools* to try.

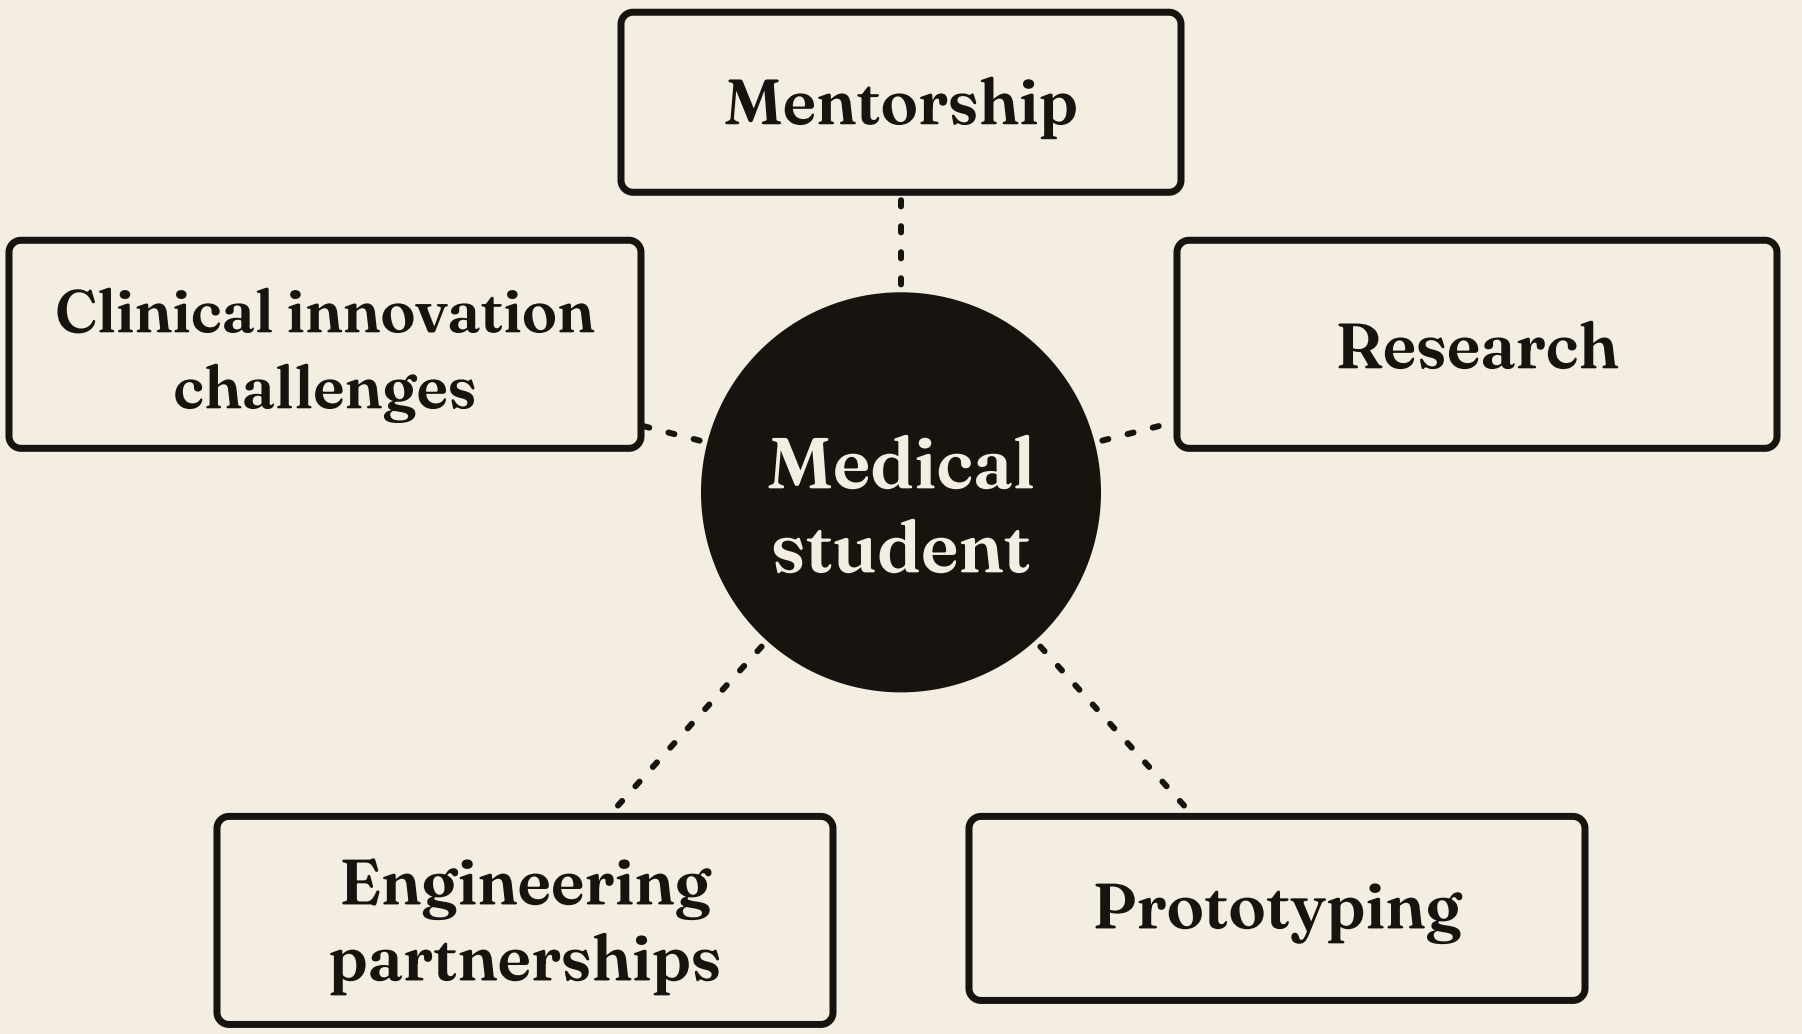

Fig. 6 — What the environment could offer.

What medical college builds can be applied *far beyond* the clinic.

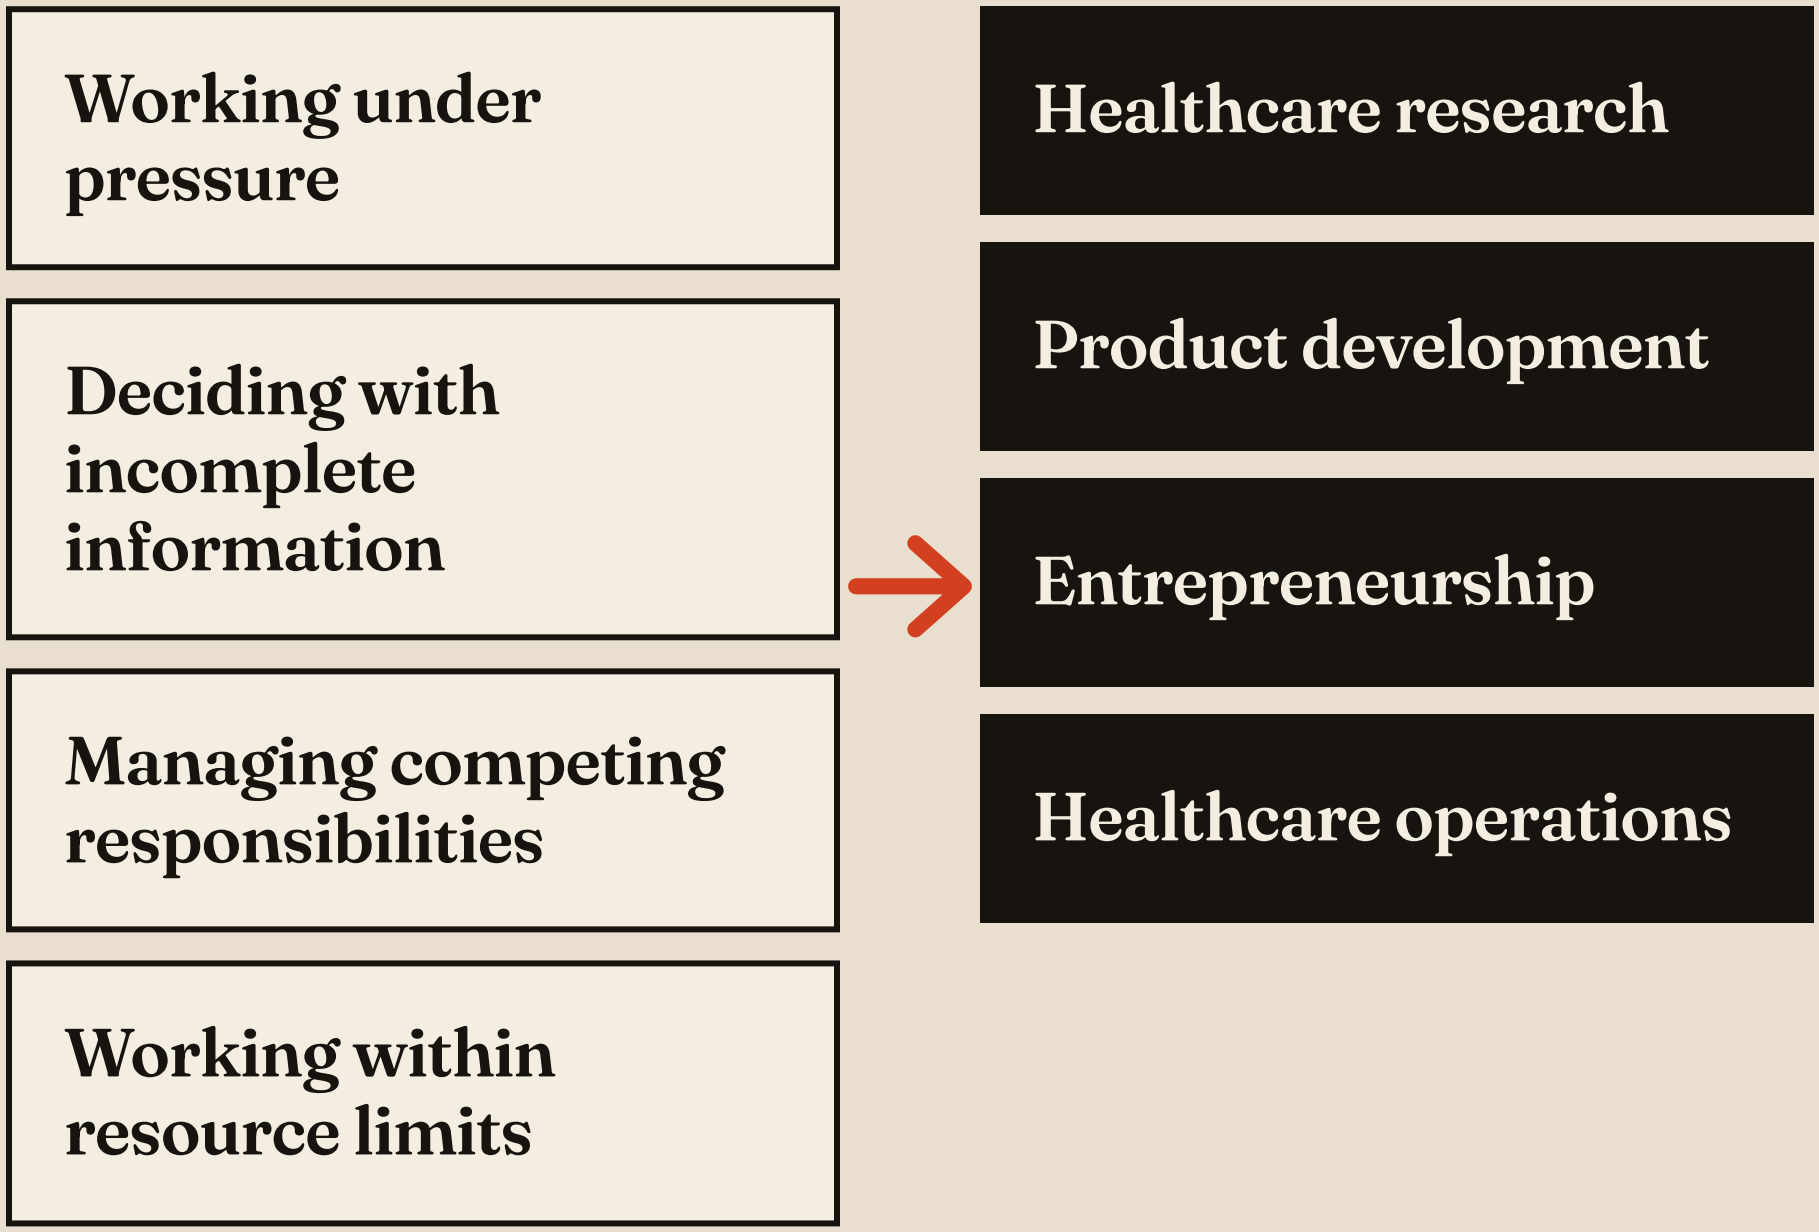

Fig. 7 — Skills built in training, and where else they can go.

Two things, *together.*

1 Improve the education we provide.

2 Expand what medical education can enable.

A medical college should be more than a place where we *learn medicine.* It should be a place where we learn *what we can do with it.*
