

ON MEDICAL EDUCATION, FROM A HOUSE SURGEON'S LENS

A conversation with Dr. Maanas Jain.

The story of Quintubate.

Dr. Sidharth Narayanan · House Surgeon, GMC Kozhikode

MBBS is the foundation of every doctor's career. Right now, it feels undervalued.

This series is about bringing that value back, and about what the foundation can lead to.

This one sits between the series and People of Healthcare: a doctor who set out to build.

Dr. Maanas Jain

Founder and CTO, Quintubate Pvt Ltd

MBBS, AIIMS Jodhpur

Internal Medicine, Rutgers University, USA

Sources: Dr. Jain’s Instagram profile (@quintubate); his answers to People of Healthcare.

Before starting residency, he set out to build Quintubate.

A laryngoscope costs ₹1,000 to 2,000. A video-laryngoscope costs lakhs.

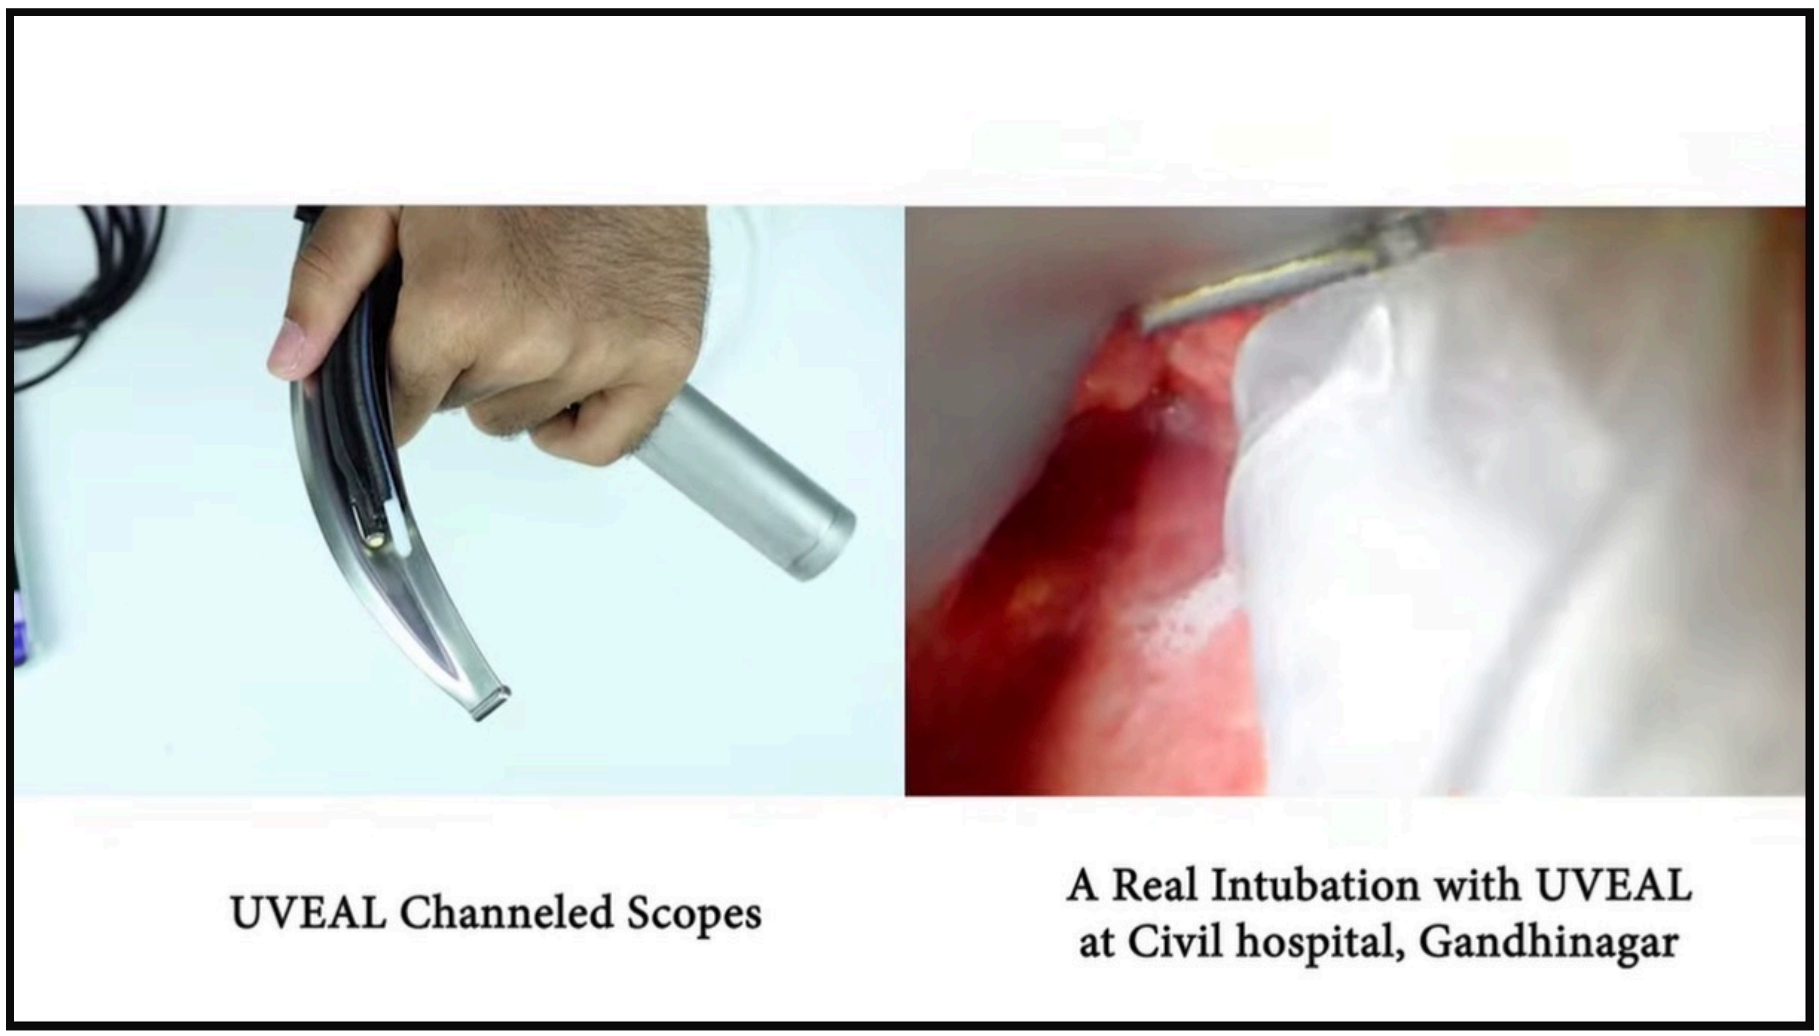

Source: figures as shown in Dr. Jain’s own video. ₹2,00,000 to ₹3,00,000 for a video-laryngoscope.

UVEAL: turning the laryngoscope a hospital already has into a video-laryngoscope.

A universal video-enabling attachment that sends the view to a smartphone.

Source: quintubate.com. The company describes UVEAL as smartphone-powered, compatible with existing laryngoscopes, and starting under ₹10,000; the video-laryngoscope comparison is the company’s own. The device is described by the company as CDSCO certified.

A real intubation, at a government hospital.

UVEAL Channeled Scopes

A Real Intubation with UVEAL at Civil hospital, Gandhinagar

Source: Dr. Jain’s video, captioned “A real intubation with UVEAL at Civil Hospital, Gandhinagar”.

I asked him ten questions about building in Indian healthcare.

His answers, in his words, for People of Healthcare.

I ASKED

What are you building?

DR. MAANAS JAIN

> “Quintubate is an initiative focussed on democratizing access to high-tech, expensive medical devices... at a sustainable cost for Indian healthcare.”

I ASKED

What is your biggest project?

DR. MAANAS JAIN

> “UVEAL attaches to existing laryngoscopes and transforms them into cost-effective videolaryngoscopes... brings down the cost of videolaryngoscopy from the lakhs to the thousands. In a span of 6 months since commercialization, UVEAL is being used by 250+ doctors across India and 12 other countries.”

I ASKED

What are the bottlenecks you face?

DR. MAANAS JAIN

> “The medical device ecosystem is largely limited to a select few companies, all based internationally, and hence healthcare in India is not supportive of made-in-India devices. Clinicians are not aware, and are skeptical of Indian medical device startups.”

I ASKED

What bridges need to be built?

DR. MAANAS JAIN

> “There needs to be an ecosystem for hospitals to learn about new licensed products developed by medical device startups as well as an incentive to adopt such indigenously designed devices. Regulators and medical colleges need to be on the lookout and supportive to push for the adoption of such devices to promote a culture of development.”

I ASKED

How can we increase adoption and discovery?

DR. MAANAS JAIN

> “Fostering dialogue between medical device startups and existing hospitals, and having the opportunity to present the work to them would greatly enhance the chances of adoption.”

I ASKED

How do you see the future of healthcare?

DR. MAANAS JAIN

> “The trend of medical devices is towards consolidation of all high-tech products in a select few companies, none of which are based in India. If Indian [doctors and hospitals] do not push for development and adoption of indigenous devices, medical device innovation in India will inevitably stagnate.”

I ASKED

What needs to be done?

DR. MAANAS JAIN

> “There is a big opportunity. Since very few medical devices are actually made in India, there is a huge scope for founders to pitch in and innovate to fill that large gap.”

What he needs right now.

Meetings with hospitals and administrators, to explain the device and how it can be procured.

Access to grants for new prototype development.

An introduction to hospital administrators and government healthcare officials.

Some doctors don’t wait. They build.

I am connecting with 50 healthcare and MedTech leaders and builders in Kerala before 2026 ends, through People of Healthcare.

KNOW SOMEONE BUILDING IN HEALTHCARE?
